Culture of Community

- Honest and transparent.
- Contributor vs. Consumer
- Initiative and Proactive vs. reactive
- Actions vs. suggestions
- Deep reading
- Do your homework first before asking for help or for more info
- No repeated questions
- Welling to help before seeking recognition
- Quality of contribution
- Welling and looking for feedback even if it's too tough
- Community only opens the door, you have to walkthrough it

How to start contribution to DevOps Open Source...

There are only 3 ways to do that....

- 1 If you don't like anything, you see an improvement or you have a suggestion, just fork and do it in your repo then raise a PR (Pull Request).
- 2 If you don't want to do it, just raise an issue/enhancement/bug, etc. on GitHub related project.
 - EasyApp

 - Docs
<https://github.com/DevOpsVisions/Docs/issues>
- 3 If you really want to contribute and do anything but you don't know from where to start Just go to the backlog and pick any item that you see you can do it, then do as the same as the first point, fork, do it and raise PR.

Learn by doing.....End-to-End

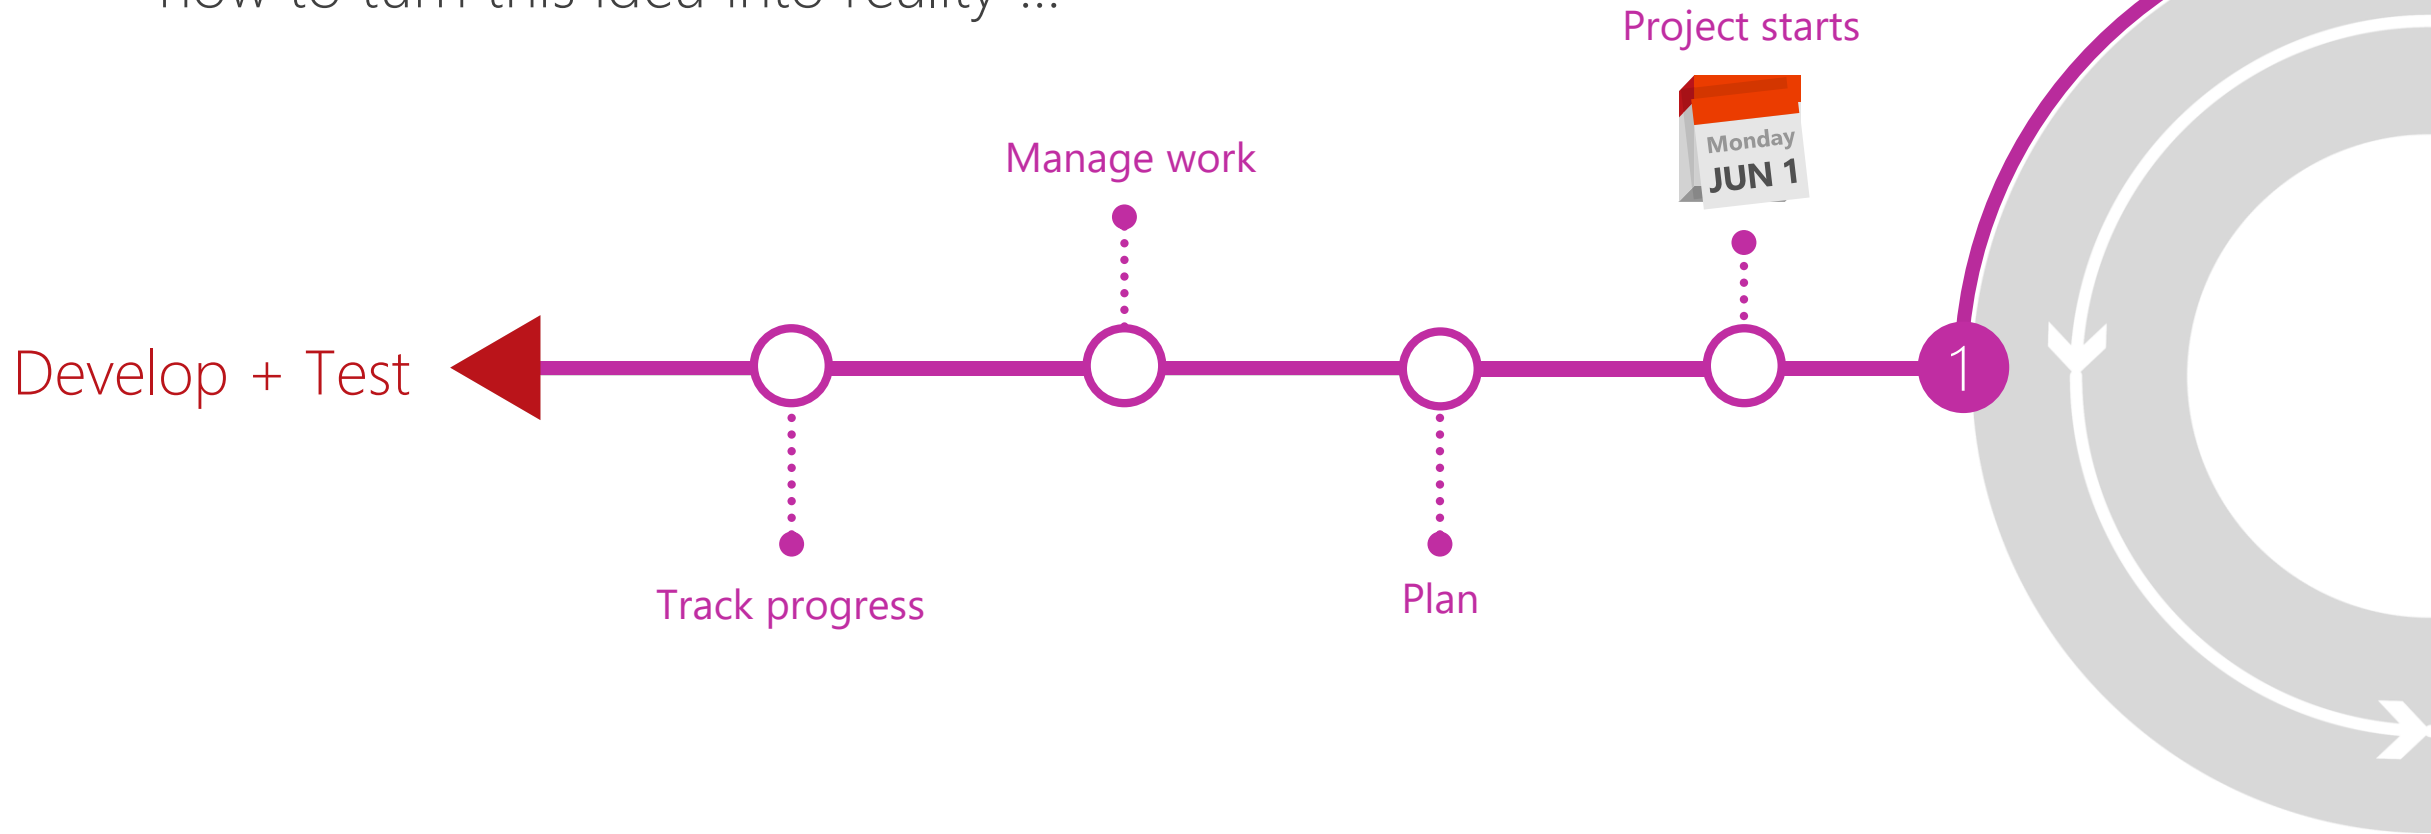

DevOps

Plan + Track

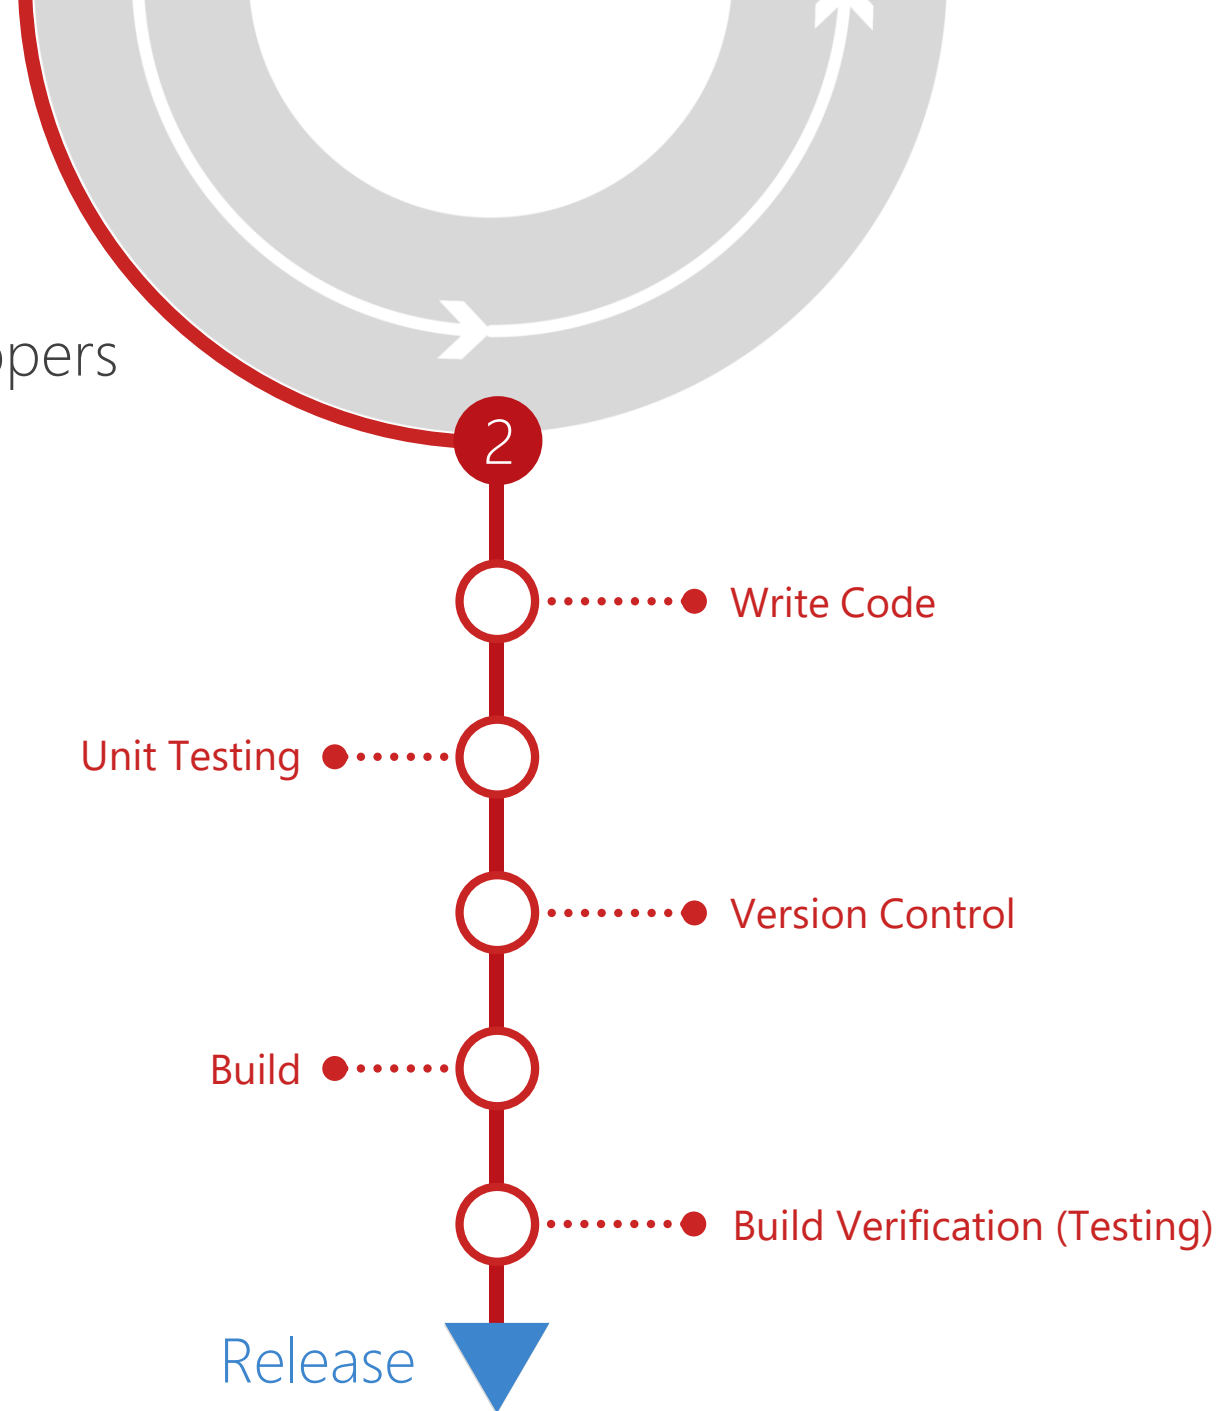

It starts with an idea – and a plan
how to turn this idea into reality ...

Develop + Test

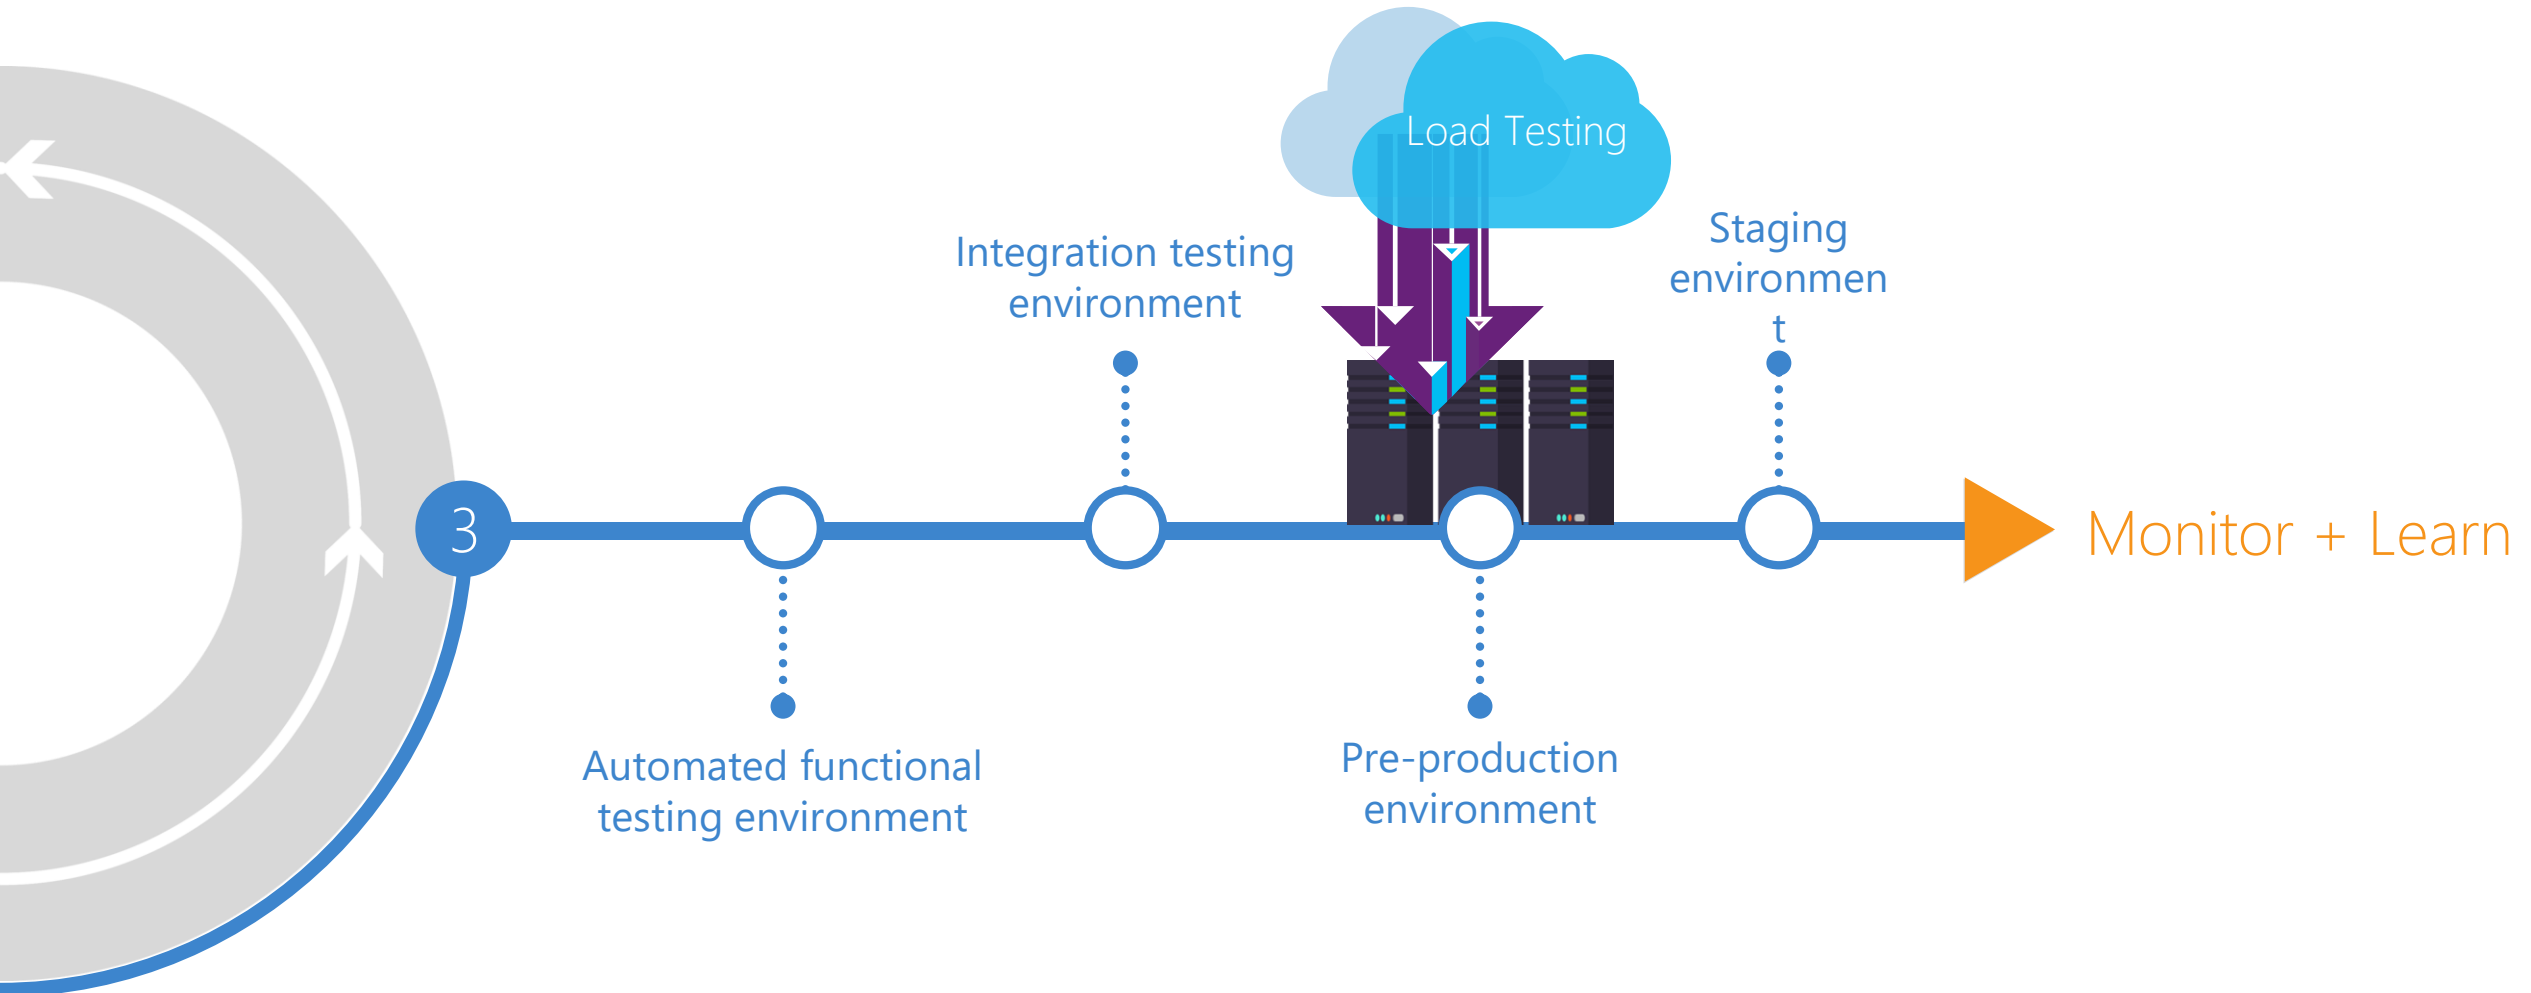

Once the iteration starts, developers turn great ideas into features ...

Release

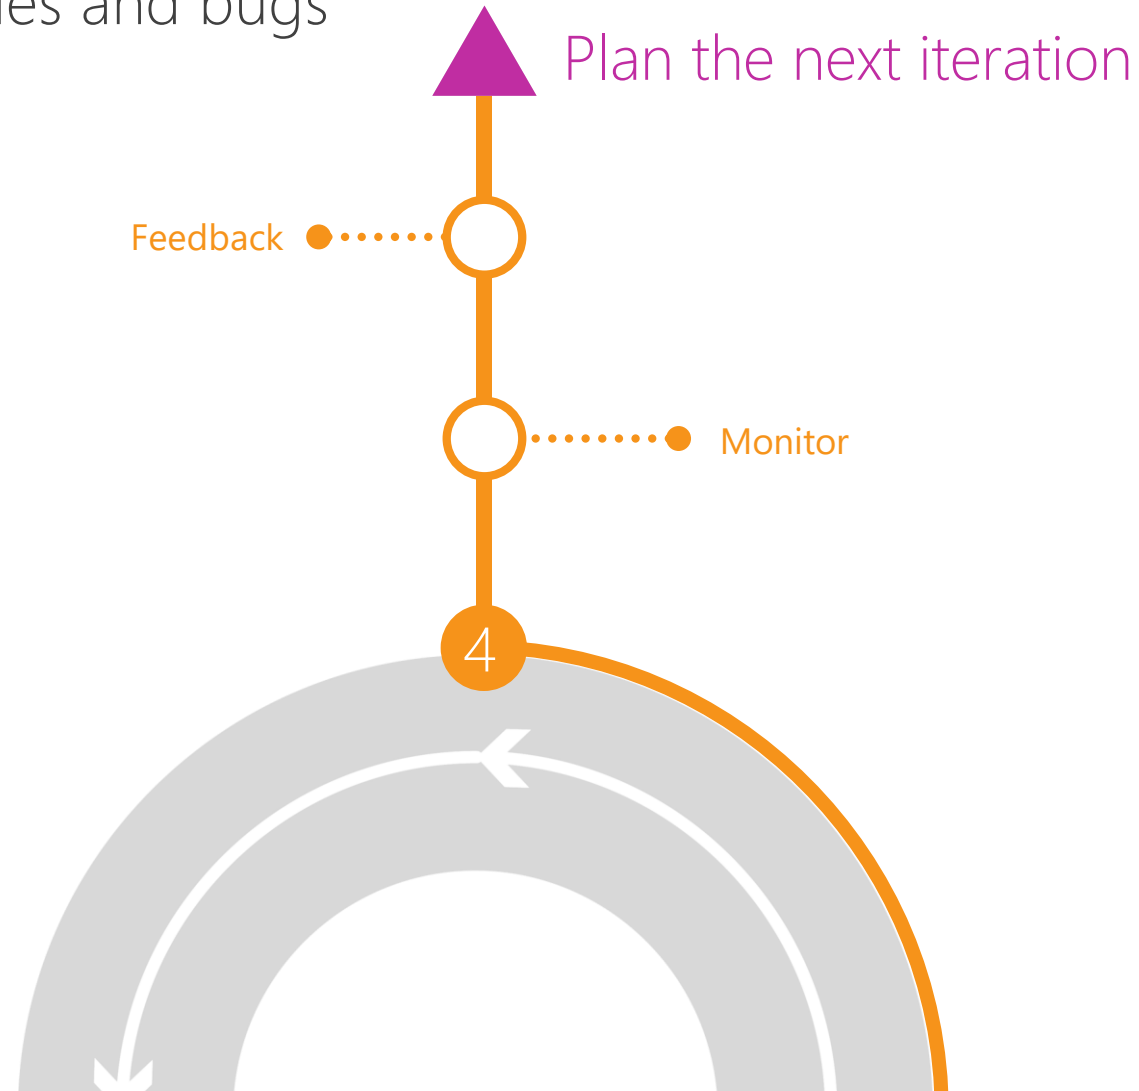

When all tests pass, the build is deployed to testing environments for each stage in the release process

Monitor + Learn

Learn and understand how users use your app, how it reacts and quickly fix issues and bugs
